In Fig. 3 the following were corrected:

1. We found that pictures of Folic acid, M-Grg3 and L-Grg3 in Fig. 3 were misused. We re-selected the typically representative images of ROS in Fig. 3C, and the selected images were more representative. This operation does not affect the scientific conclusion.
2. The blue channel is DAPI and the red channel is DHE. And the DAPI and DHE were mis-labeled with each other in the present Fig. 3. We thus have re-labeled them in the right place in new corrected Fig. 3.

Also the following corrections were made to Figure 5:

1. The magnification of Fig. 5D should be 400× instead of 100×

2. After careful checking for full raw data and recalculating the data, we found that *P* value label should be “##” or “\*\*” instead of “#” or “\*” in Fig. 5E and 5F. This operation did not change the scientific conclusion.

3. The word “noramal” was corrected to “normal”.

The original article has been corrected.

**Ready to submit your research? Choose BMC and benefit from:**

- fast, convenient online submission
- thorough peer review by experienced researchers in your field
- rapid publication on acceptance
- support for research data, including large and complex data types
- gold Open Access which fosters wider collaboration and increased citations
- maximum visibility for your research: over 100M website views per year

**At BMC, research is always in progress.**
